# Problem Statement

By estimation, the fashion industry accounts for about 8% of the total global CO2 emission.

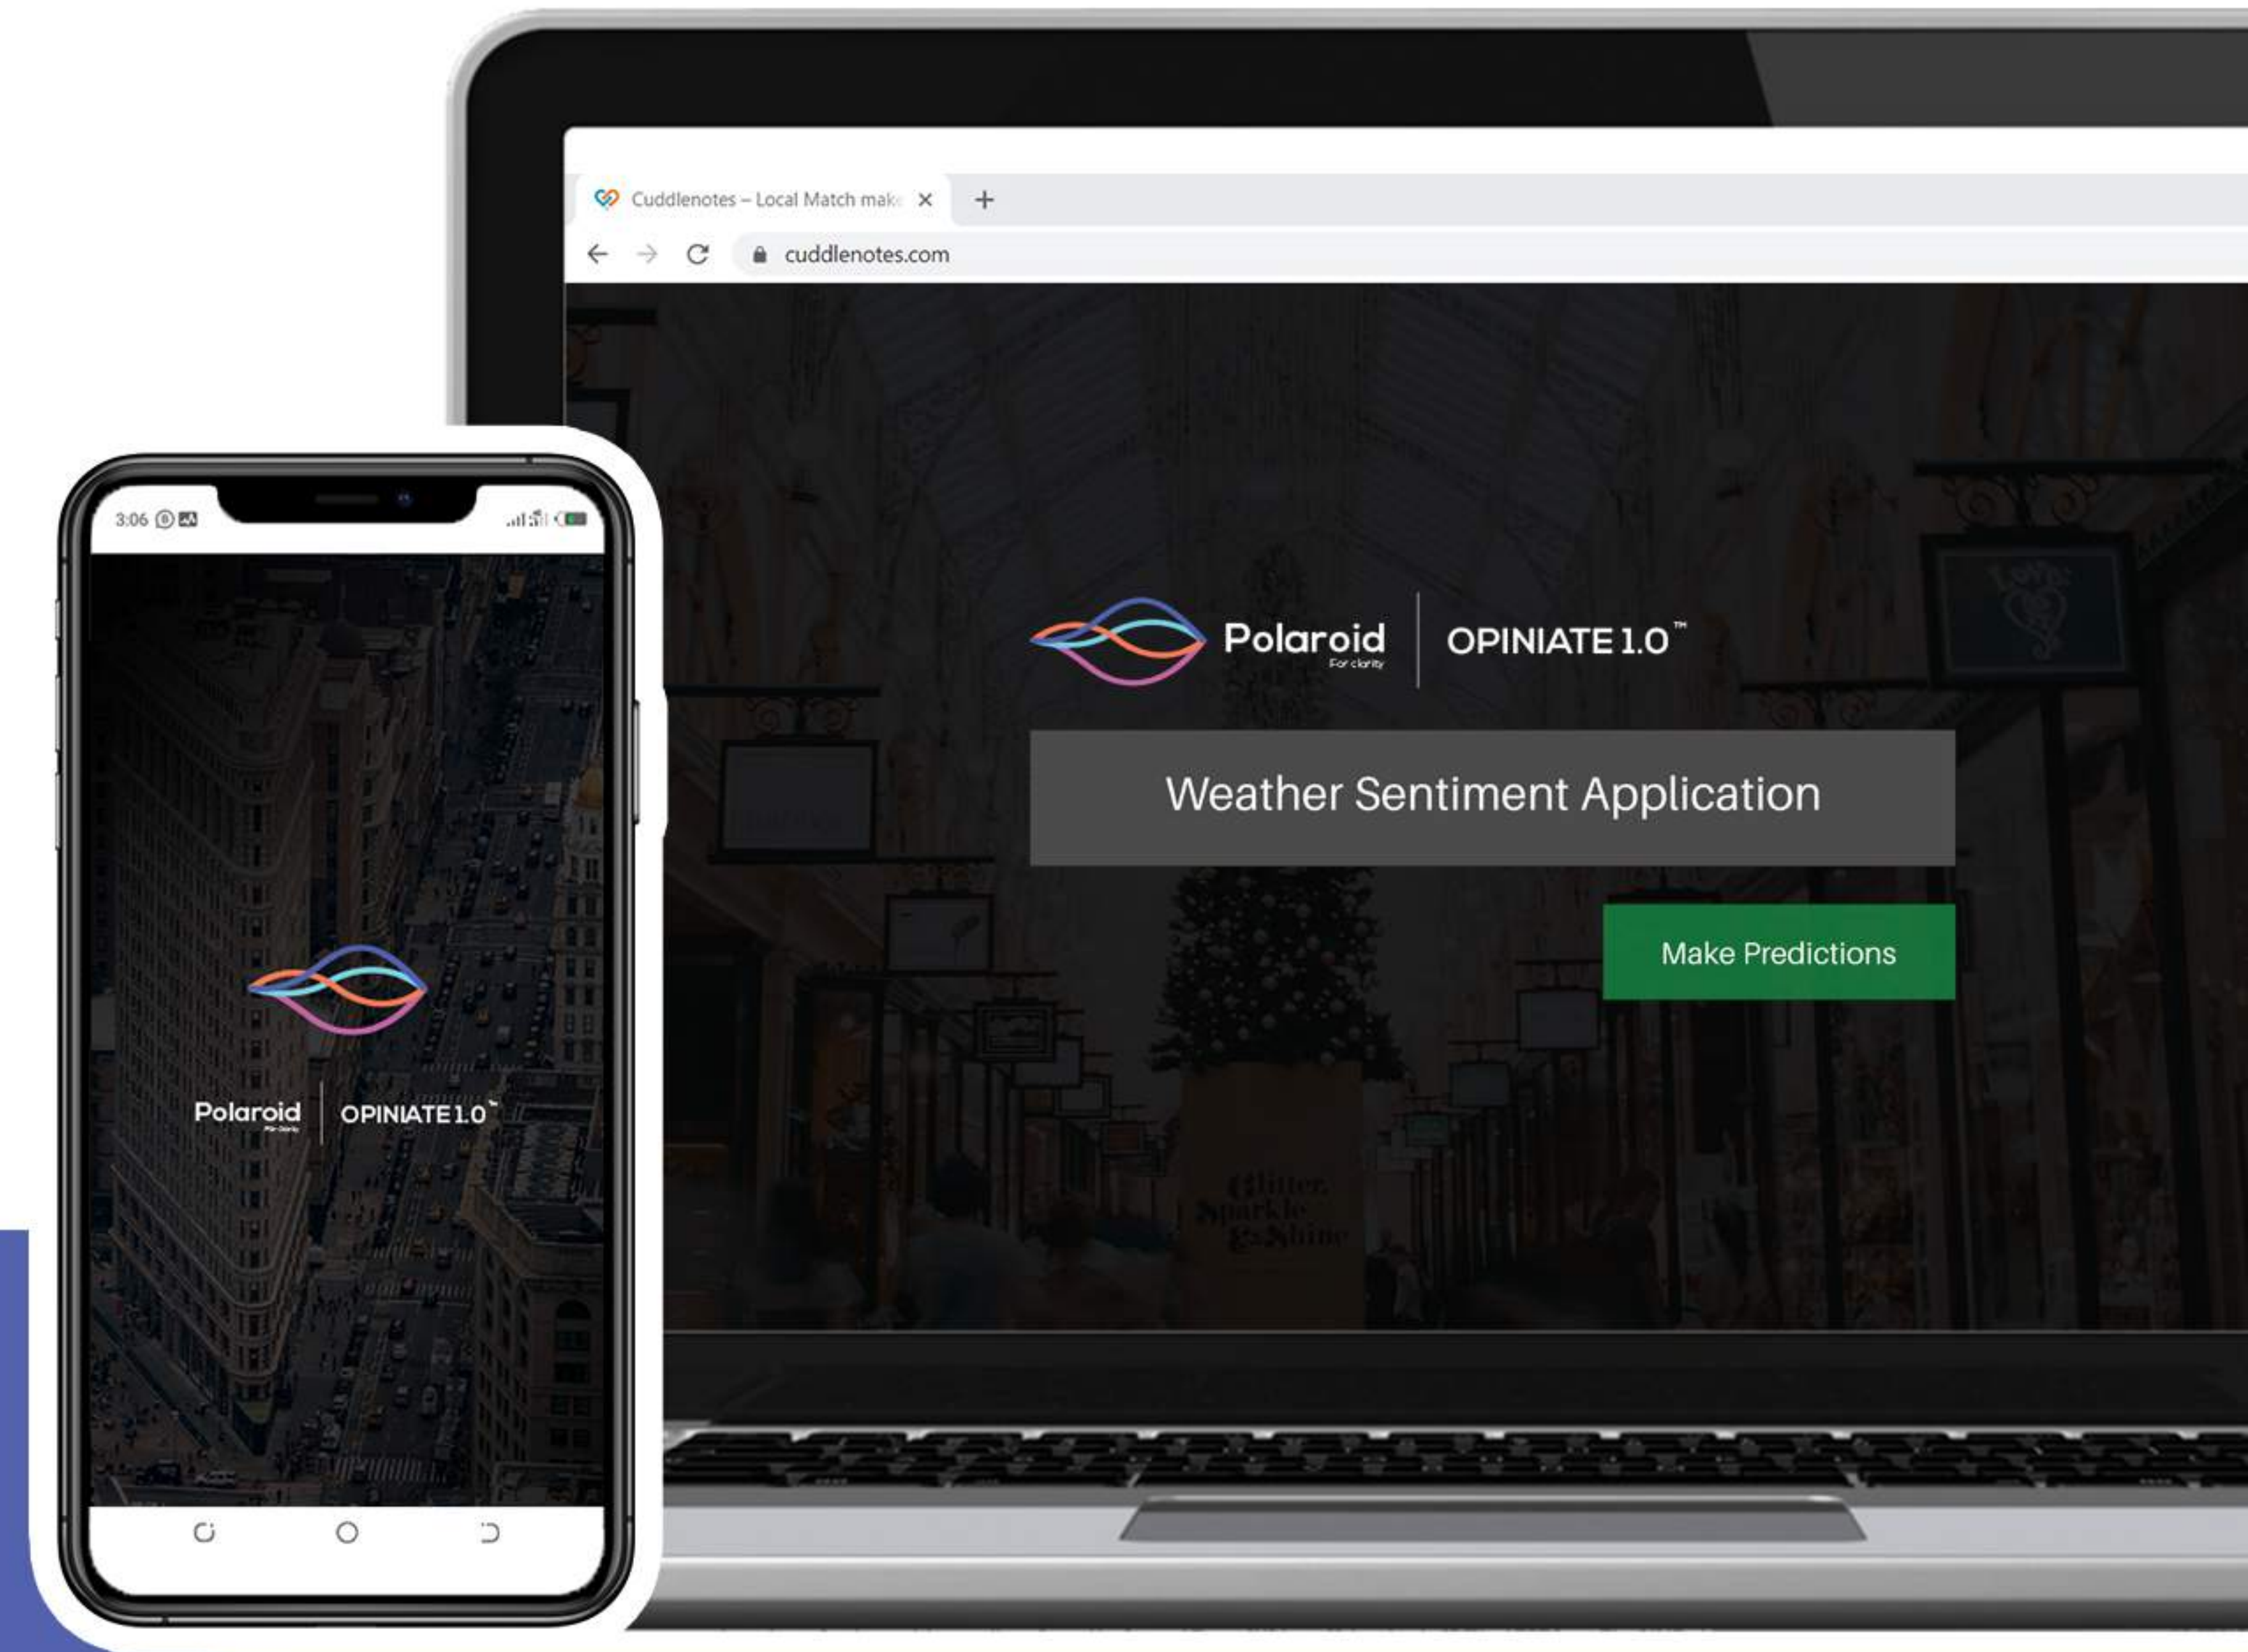

Therefore it becomes important to reduce the need for new clothes.

# The Product

## Opiniate 1.0

Among our products is Opiniate 1.0, which allows users to predict the climate change sentiments of specific regions.

# OPINIATE 1.0<sup>TM</sup>

**Opiniate 1.0** is a system trained on twitter data to recognize sentiments from tweets on climate change.

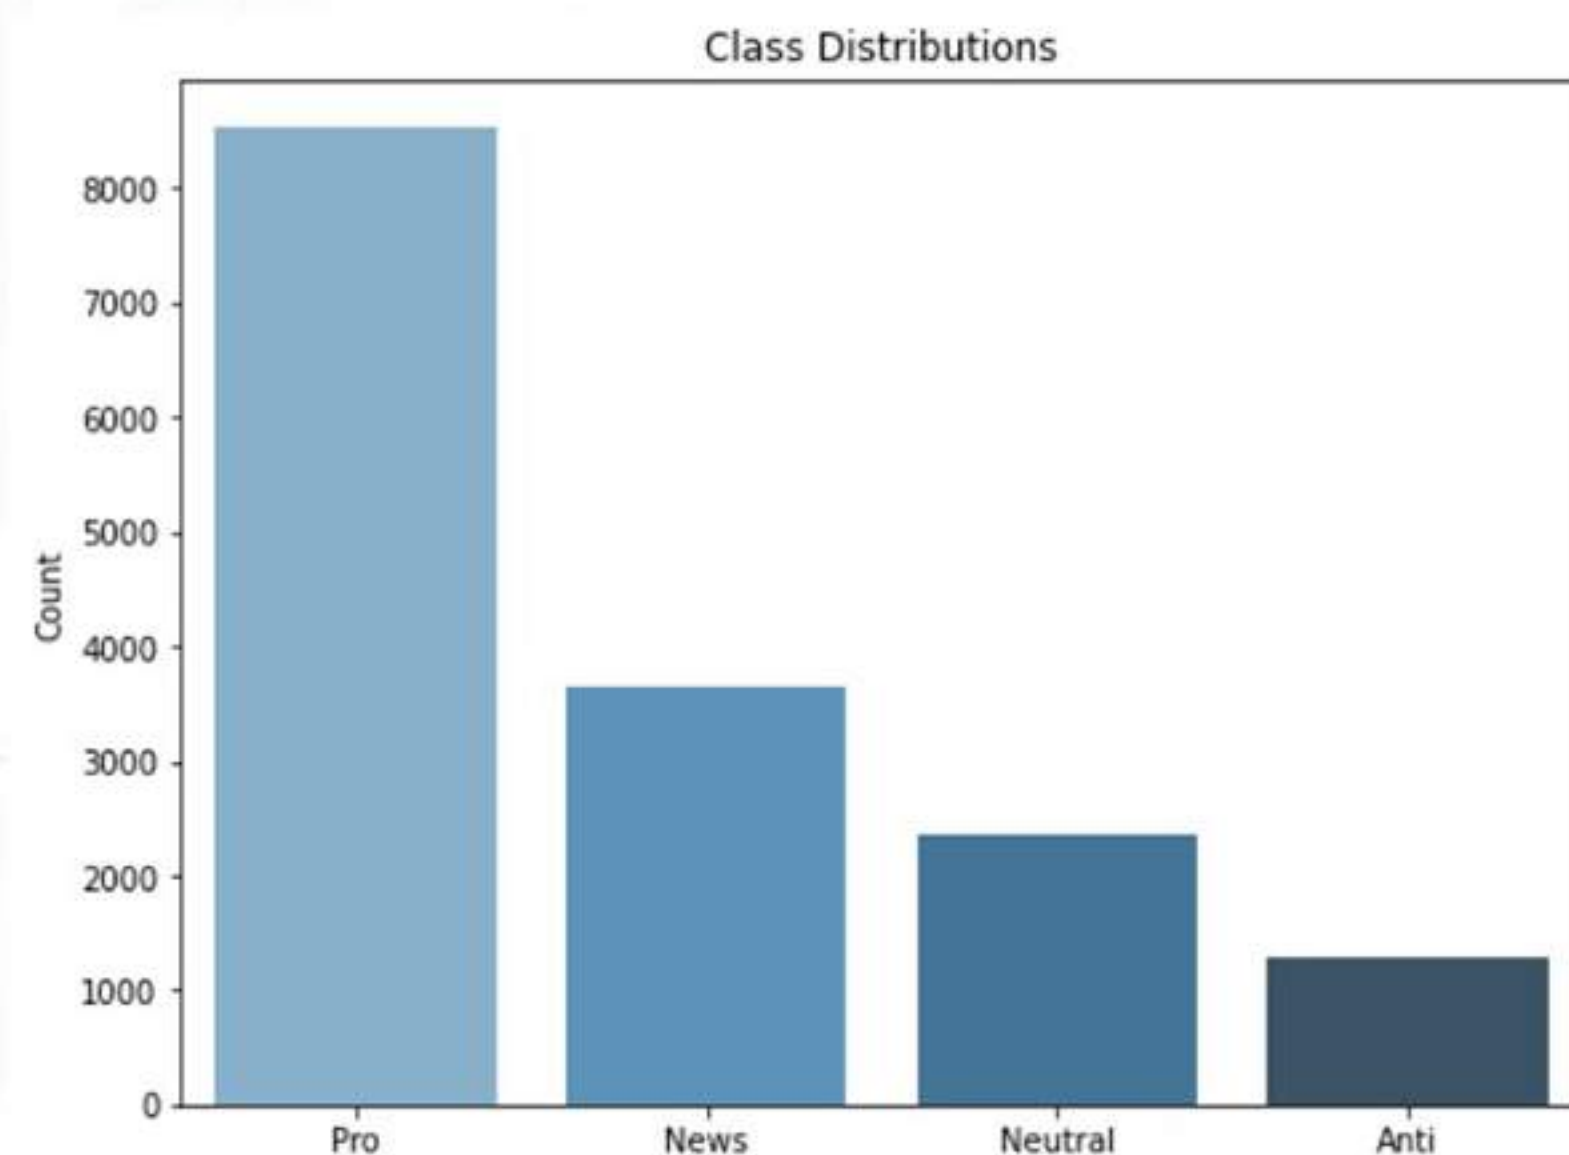

It accepts texts and produces the underlying sentiment.

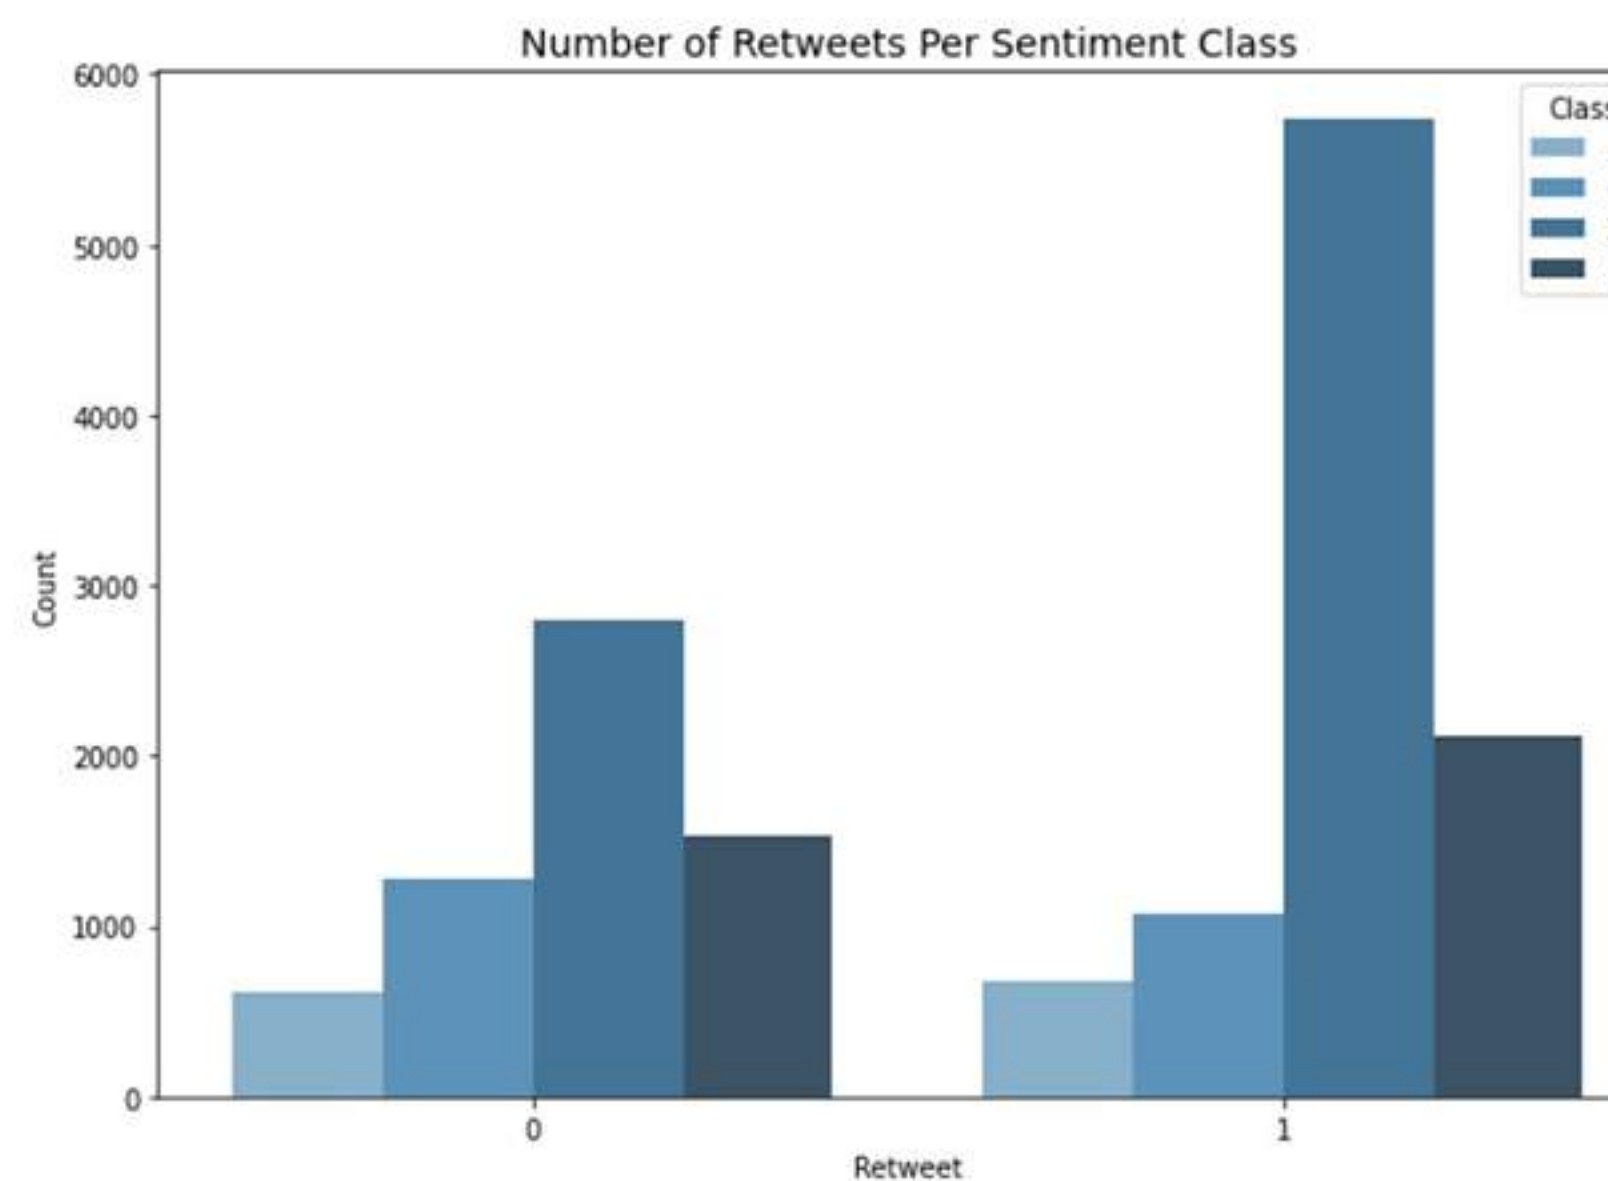

**Polaroid**  
For clarity

**OPINIATE 1.0<sup>TM</sup>**

The training data indicates most of the tweets support man made climate change.

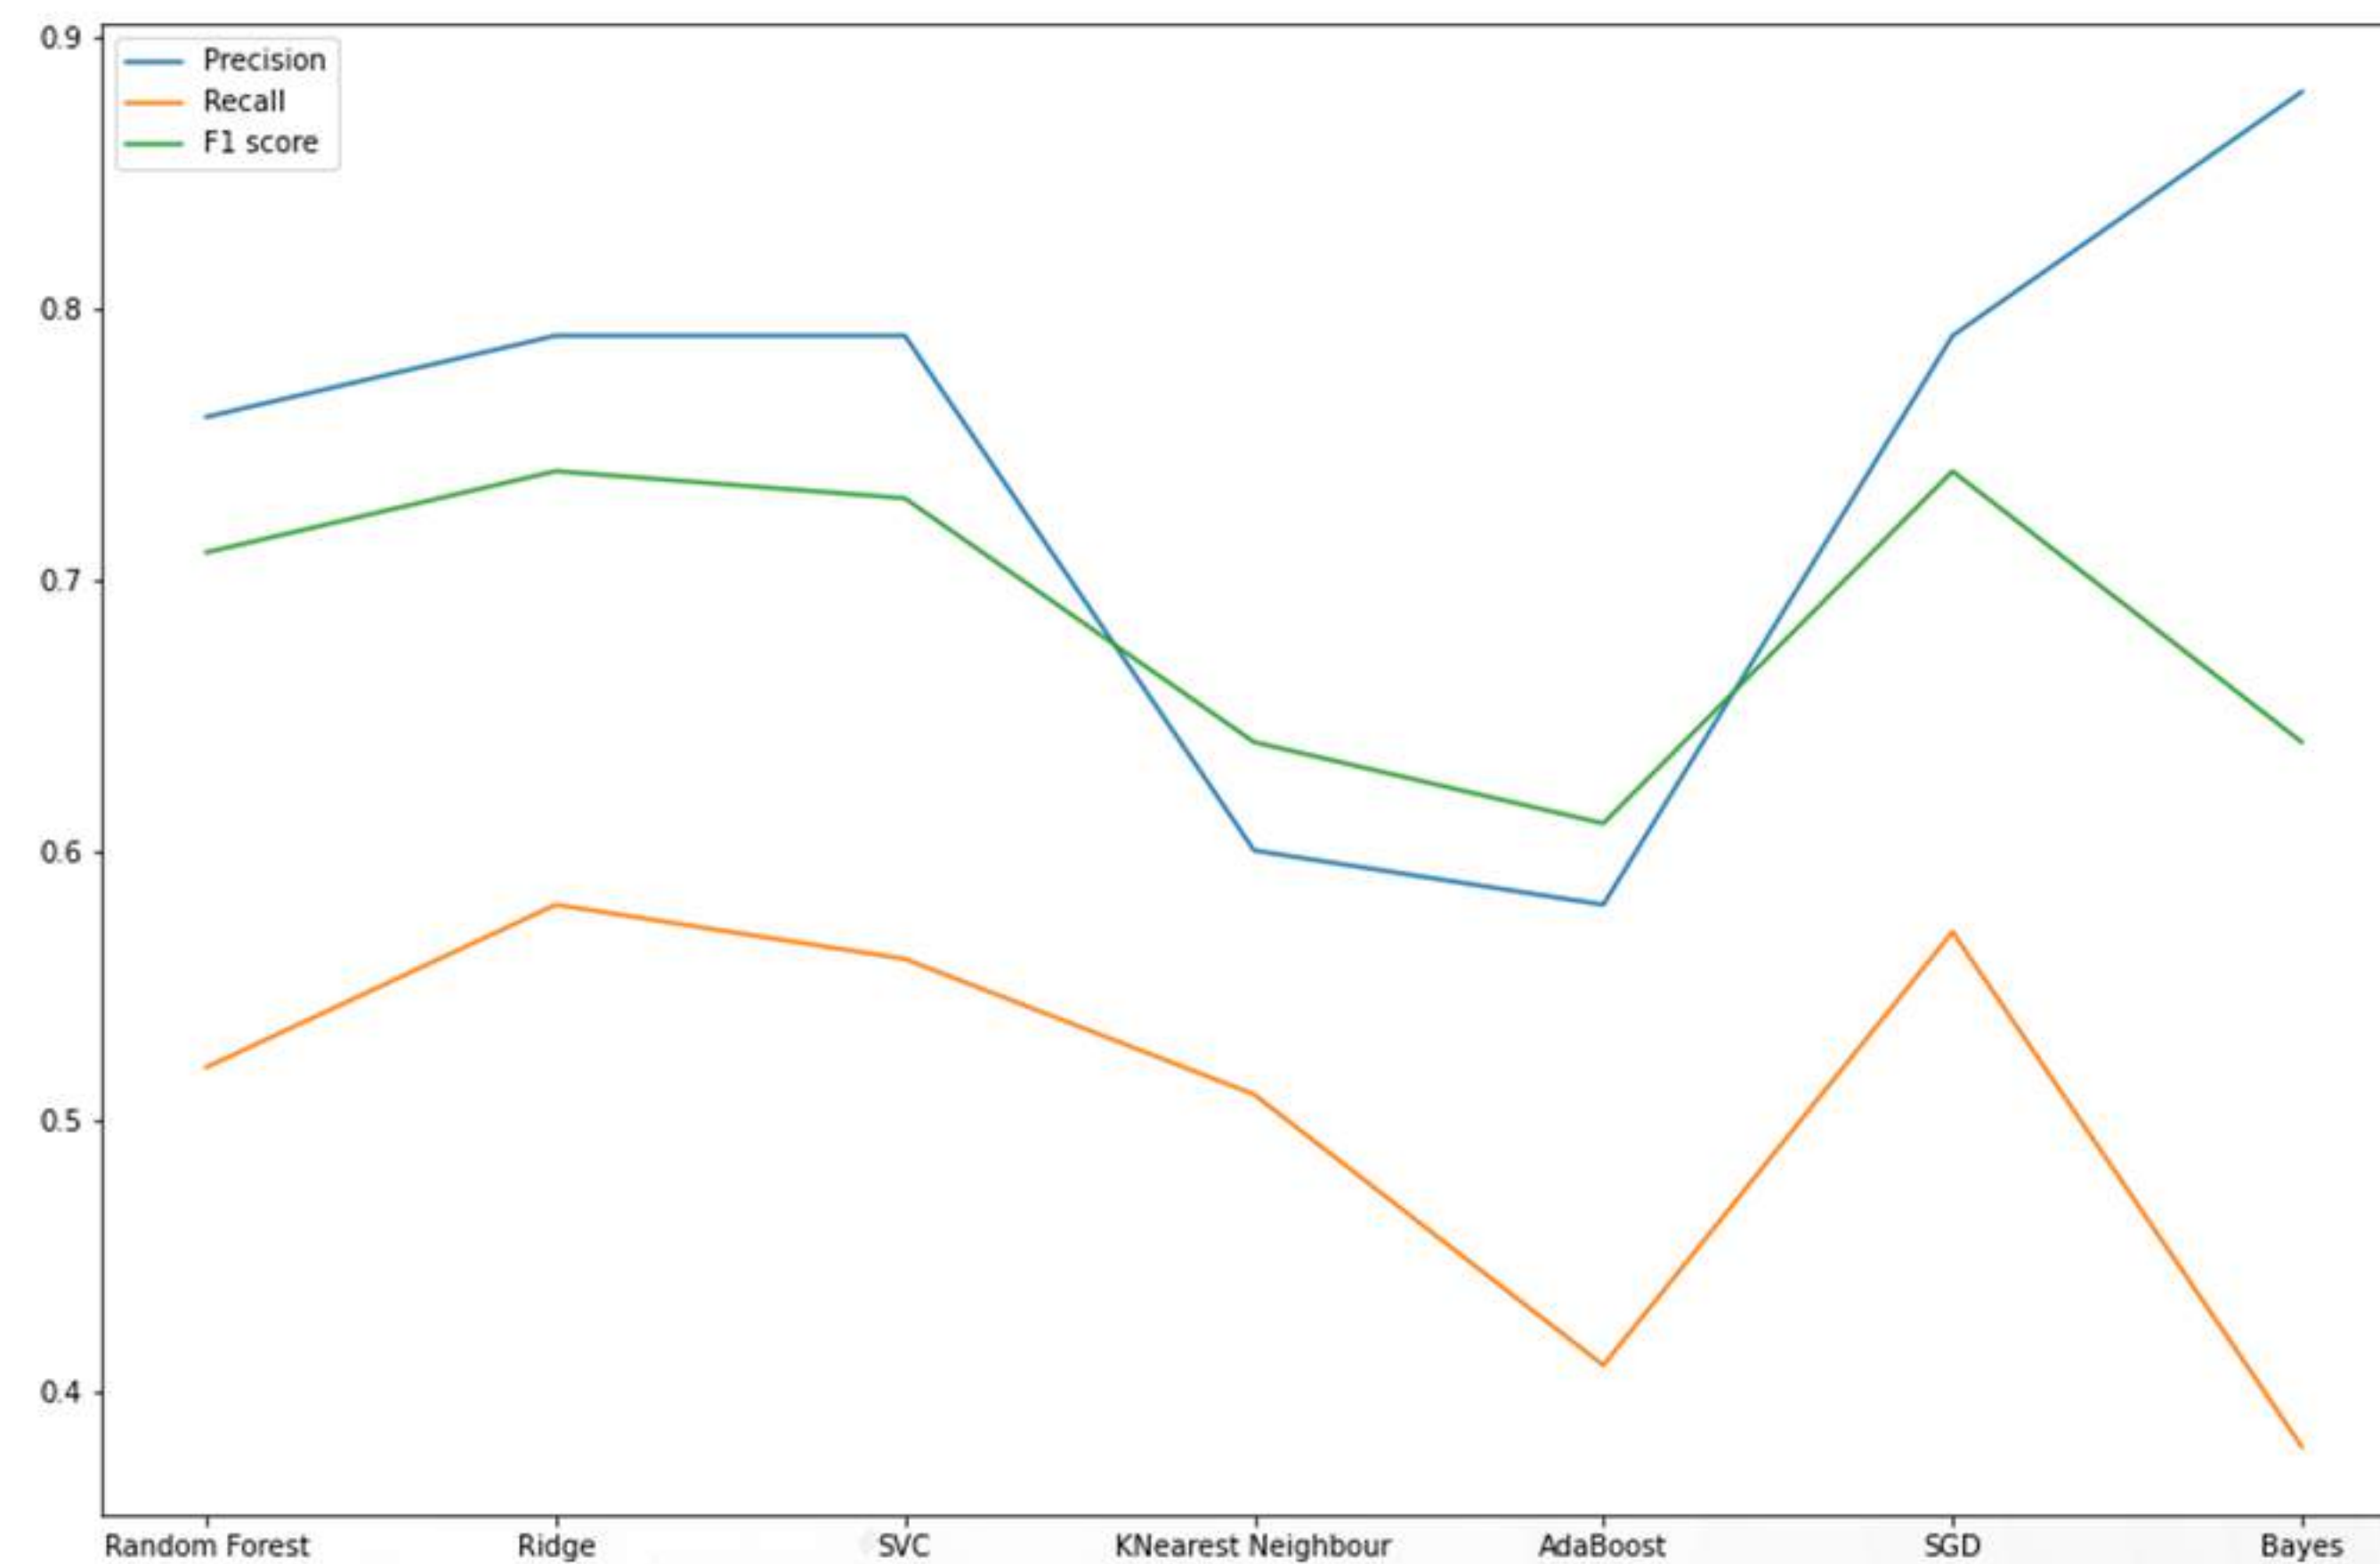

The number of retweets that support man made climate change are more than twice any other class

# Model Exploration

The general interest is on the accuracy of the model. Our number one choice is the Ridge Model.
